

Quartz Start Up

Step 01

First things first

It is normal for the pool to be cloudy. Turn on your equipment and make sure everything is running smoothly.

How to care for your new Quartz Interior

The pool is full when the water reaches the middle of the waterline tile, then you can add chemicals and turn on your equipment.

Step 02

Next we add the chemicals

Add 2 gallons of Chlorine and 1 gallon of Muriatic Acid evenly to the pool, avoid directly dumping on steps or benches/seats.

Step 03

Getting debris out of the pool

It's completely normal for debris to come out of the returns, try to use a pool net to get debris out of the pool.

Step 04

Running equipment & brushing the pool

Run the pump for 72 hours consecutively and brush the pool at least once a day for the first week, in order to remove all the sediment (plaster dust).

- Do not use Wheeled Vacuums for 4 weeks.
- Do not use Salt System for 4 weeks.
- Do not use Heater for 4 weeks.
- Keep chemicals maintained(chemical mistreatment not covered under warranty).
- Organic & Non-organic stains not covered under warranty.
